

WEDGE FOR ROTATIONAL KING PIN BOXES

If you are towing with a PullRite Super 5th hitch and use a rotational king pin box (brand named Turning Point, Sidewinder, and Orbital), our precision-fit pin box wedge (part # 331724) is optimal for the best towing performance.

NOTE: *Not suitable for the #1900 Super 5th.*

INSTRUCTIONS TO INSTALL THE WEDGE

1. Detach the wedge provided by the king pin box manufacturer (usually bolted onto the underside of the king pin box), and store away that wedge (Fig. A). Use the (2) bolts and (2) washers for the next steps.
2. Align the wedge so that the narrow end is facing the hitch (Fig. B). Make sure the wedge slot matches up with the threaded holes directly behind the king pin on the underside of the king pin box. The wedge should be in line directly behind the king pin (Fig. C).
3. Attach the wedge with the (2) bolts and (2) washers from step 1 (Fig. C). Tighten bolts to 200 foot pounds.
